Confidence Interval

What is the average income of an Indian Person ?

Population

A Confidence Interval is an interval of numbers containing the most plausible values for our Population Parameter.

(1850 , 2150)USD

Confidence Interval

What is the average income of an Indian Person ?

Population

A Confidence Level is the degree of confidence.

Confidence Interval

What is the average income of an Indian Person ?

Population

A Confidence Level is the degree of confidence.

Generally 90%, 95%, 98%

Confidence Interval

The survey of 100 people reported the average income to be $2,195. If the standard deviation for average income was $596.
Construct a 95% confidence interval for the average income?

Confidence Interval

The survey of 100 people reported the average income to be $2,195. If the standard deviation for average income was $596.
Construct a 95% confidence interval for the average income?

$$\bar{X} \pm Z\frac{\sigma}{\sqrt{n}}$$

Confidence Interval

The survey of 100 people reported the average income to be $2,195. If the standard deviation for average income was $596.
Construct a 95% confidence interval for the average income?

$$\bar{X} \pm Z\frac{\sigma}{\sqrt{n}}$$

$\bar{X}$ → Sample Mean

Z → Z score

σ → Standard deviation

n → Sample Size

Confidence Interval

The survey of 100 people reported the average income to be $2,195. If the standard deviation for average income was $596.
Construct a 95% confidence interval for the average income?

$$\bar{X} \pm Z\frac{\sigma}{\sqrt{n}}$$

$\bar{X}$ → Sample Mean

Z → Z score

σ → Standard deviation

n → Sample Size

$$Z = \frac{x - \mu}{\sigma}$$
